MANUSCRIPTS IN PREPARATION

- [24] “The space-time amplitude approach to relativistic quantum mechanics: The Schwinger effect”
J. Feldbrugge, A. Fertig, L. Sberna, and N. Turok.
We propose a reformulation of quantum field theory in terms of relativistic quantum

mechanics that allows for the propagation between space-time regions. Using this generalization, we develop relativistic weak-value theory, which enables us to study the evolution of a relativistic quantum particle. We apply this novel framework to the Schwinger effect of a charged scalar particle in an electric field.

- [25] “Cosmic web & caustic skeleton in the Zel’dovich formalism”

J. Feldbrugge, R. van de Weygaert, and J. Hidding.

We perform a numerical investigation of the three-dimensional caustic skeleton proposed in earlier work. We develop methods for the detection of the caustic skeleton in initial conditions and compare the skeleton to dark matter N-body simulations at late times.

- [26] “Gravitational waves from shock waves in the early universe”

J. Feldbrugge, U.-L. Pen, and N. Turok.

The curvature perturbations which oscillated after horizon reentry can be shown to steepen in form weak shock waves. Since the intersection region of two shocks can reach superluminal speeds, we demonstrate that these shocks generate gravitational Cherenkov radiation which we can potentially be measured in the next generation gravitational wave detectors.

THESES

- [27] **J. Feldbrugge**, “Path integrals in the sky: Classical and quantum problems with minimal assumptions,” PhD thesis, Perimeter Institute, University of Waterloo, supervised by N. Turok (2019). [Available online.](#)

- [28] **J. Feldbrugge**, “Primordial non-Gaussianity and large-scale structure,” Part III Essay, University of Cambridge, supervised by P. Shellard and T. Giannantonio (2015). [Available online.](#)

- [29] **J. Feldbrugge**, “Statistics of caustics in large-scale structure formation,” Master thesis, University of Groningen, supervised by R. van de Weygaert, D. Roest, A.E. van Enter (2014). [Available online.](#)

- [30] **J. Feldbrugge** and M. van Engelen, “Analysis of Betti numbers and persistence diagrams of two-dimensional Gaussian random fields,” Bachelor thesis, University of Groningen, supervised by R. van de Weygaert, E. Pallante, G. Vegter (2012). [Available online.](#)
